

ROCKET RACK

V.2 CR-MO

INSTALLATION INSTRUCTIONS

Requirement

1. Fork with a drilled crown hole for caliper brake and has an axle to crown distance of 368 to 420mm.
2. Front eyelets on the fork dropout or M5 bosses on both sides of the fork legs.

Mounting Steps

1. Use M5x16 bolts to mount both legs inside (or sometimes outside) of the platform.
2. Attach the tongue to the platform with M5x12 bolts.
3. Use an M6x50 bolt, washers, and a hex sliding nut to attach the racks to the drilled fork crown.
4. Depending on the distance between the rack and fork mounts, use M5x16 bolts to attach the adjustable swing brackets either outside or inside of the rack mounts.
5. Use M5x16 bolts and 5mm spacers to attach the rack to the fork eyelets or fork mounts.
6. Adjust the rack to the desired location and then tighten all bolts securely.
